

Maryland Weekly Influenza Surveillance Activity Report

A summary of influenza surveillance indicators reported to DHMH for the week ending February 28, 2015

Prepared by the Office of Infectious Disease Epidemiology and Outbreak Response Infectious Disease Bureau – Prevention and Health Promotion Administration Maryland Department of Health and Mental Hygiene

The data presented in this document are provisional and subject to change as additional reports come in.

SUMMARY

During the week ending February 28, 2015, influenza-like illness (ILI) intensity in Maryland was MINIMAL and there was WIDESPREAD geographic activity. The proportion of outpatient visits for ILI decreased for reports from both Sentinel Providers and Maryland Emergency Departments. The proportion of MRITS respondents reporting ILI also dropped. The proportion of specimens testing positive for influenza at clinical laboratories decreased for the ninth straight week. The number of specimens tested for influenza by DHMH lab increased, as did the percent that were positive. A total of 32 influenza-associated hospitalizations were reported. There was 1 respiratory outbreak. Nationally, influenza activity is on the decline.

ILINet Sentinel Providers

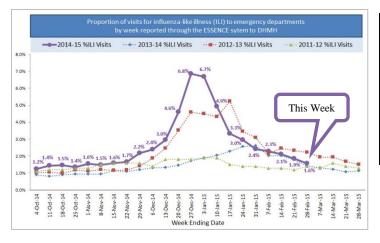

Twenty-seven sentinel providers reported a total of 10,131 visits this week. Of those, 159 (1.6%) were visits for ILI. This is below the Maryland baseline of 2.0%.

ILI Visits To Sentinel Providers By Age Group	This Week Number (%)	Last Week Number (%)	Season Number (%)
Age 0-4	33 (21%)	41 (30%)	1144 (25%)
Age 5-24	65 (41%)	47 (35%)	1897 (41%)
Age 25-49	39 (25%)	32 (24%)	987 (21%)
Age 50-64	17 (11%)	10 (7%)	426 (9%)
Age ≥ 65	5 (3%)	5 (4%)	205 (4%)
Total ILI Visits	159 (100%)	135 (100%)	4659 (100%)

Visits to Emergency Departments for ILI

Emergency Departments in Maryland reported a total of 46,254 visits this week through the ESSENCE surveillance system. Of those, 723 (1.6%) were visits for ILI.

ILI Visits To Emergency Departments By Age Group	This Week Number (%)	Last Week Number (%)	Season Number (%)
Age 0-4	190 (26%)	190 (25%)	6689 (24%)
Age 5-24	172 (24%)	210 (27%)	8442 (31%)
Age 25-49	220 (30%)	227 (29%)	7207 (26%)
Age 50-64	75 (10%)	79 (10%)	2919 (11%)
Age ≥ 65	66 (9%)	65 (8%)	2216 (8%)
Unknown	0 (0%)	0 (0%)	3 (<1%)
Total ILI Visits	723 (100%)	771 (100%)	27476(100%)

Maryland Weekly Influenza Surveillance Activity Report

A summary of influenza surveillance indicators reported to DHMH for the week ending February 28, 2015

Community-based Influenza Surveillance (MRITS and Google Flu Trends)

MRITS is the Maryland Resident Influenza Tracking System, a weekly survey for influenza-like illness (ILI). A total of 630 residents responded to the MRITS survey this week. Of those, 5 (0.8%) reported having ILI and missing a cumulative 10 days of regular daily activities. According to Google Flu Trends, influenza activity is "Low" in Maryland.

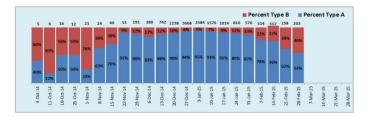

Clinical Laboratory Influenza Testing

Thirty-five clinical laboratories reported performing 2,195 influenza diagnostic tests, mostly rapid influenza diagnostic tests (RIDTs). Of those, 203 (9.2%) were positive for influenza. Of those testing positive, 109 (53.7%) were influenza Type A and 94 (46.3%) were influenza Type B. The reliability of RIDTs depends largely on the conditions under which they are used. False-positive (and true-negative) results are more likely to occur when the disease prevalence in the community is low, which is generally at the beginning and end of the influenza season and during the summer.

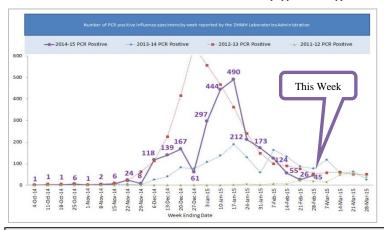

Positive Rapid Flu Tests by Type	This Week Number (%)	Last Week Number (%)	Season Number (%)
Type A	109 (54%)	156 (62%)	13642 (90%)
Туре В	94 (46%)	97 (38%)	1593 (10%)
Total	203 (100%)	253 (100%)	15235(100%)

State Laboratories Administration Influenza Testing

The DHMH Laboratories Administration performed a total of 135 PCR tests for influenza and 45 (33.3%) specimens tested positive. Of those 39 (86.7%) were Type A (H3N2) and 6 (13.3%) were Type B. PCR testing is more reliable than RIDT. The DHMH testing identifies subtypes of influenza A, information that is not available from the RIDT results. The table below summarizes results by type and subtype.

Positive PCR Tests by Type (Subtype)	This Week Number (%)	Last Week Number (%)	Season Number (%)
Type A (H1)			2 (<1%)
Type A (H3)	39 (87%)	20 (77%)	2353 (98%)
Туре В	6 (13%)	6 (23%)	44 (2%)
A (H3) – B Dual Infection			2 (<1%)
Total	45 (100%)	26 (100%)	2401 (100%)

Where to get an influenza vaccination

Interested in getting a flu vaccine for the 2014-15 influenza season? Go to http://dhmh.maryland.gov/flumd/SitePages/getvaccinated.aspx and click on your county/city of residence. You will be redirected to your local health department website for local information on where to get your flu vaccine.

Maryland Weekly Influenza Surveillance Activity Report

A summary of influenza surveillance indicators reported to DHMH for the week ending February 28, 2015

Influenza-associated Hospitalizations

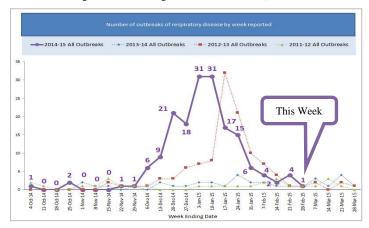

For this week, hospitals in Maryland reported 32 influenza-associated hospitalizations. (A person with an overnight hospital stay along with a positive influenza test of any kind, e.g. RIDT or PCR, is considered an "influenza-associated hospitalization" for purposes of influenza surveillance.)

Influenza- Associated Hospitalizations by Age Group	This Week Number (%)	Last Week Number (%)	Season Number (%)
Age 0-4	1 (3%)	1 (3%)	156 (5%)
Age 5-17	1 (3%)	1 (3%)	75 (2%)
Age 18-24	1 (3%)	0 (0%)	71 (2%)
Age 25-49	4 (13%)	9 (27)	335 (10%)
Age 50-64	6 (19%)	8 (24%)	524 (16%)
Age ≥ 65	19 (59%)	14 (42%)	2095 (64%)
Total	32 (100%)	33 (100%)	3256 (100%)

Outbreaks of Respiratory Disease

There was 1 respiratory outbreak reported to DHMH this week. (Disease outbreaks of any kind are reportable in Maryland. Respiratory outbreaks may be reclassified once a causative agent is detected, e.g. from ILI to influenza.)

Respiratory Outbreaks by Type	This Week Number (%)	Last Week Number (%)	Season Number (%)
Influenza	1 (100%)	4 (100%)	120 (71%)
Influenza-like Illness			35 (21%)
Pneumonia			15 (9%)
Other Respiratory			
Total	1 (100%)	4 (100%)	170 (100%)

National Influenza Surveillance (CDC)

During week 8 (February 22-28, 2015), influenza activity continued to decrease, but remained elevated in the United States,

- Viral Surveillance: Of 16,821 specimens tested and reported by U.S. World Health Organization (WHO) and National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 8, 1,834 (10.9%) were positive for influenza.
- O Pneumonia and Influenza Mortality: The proportion of deaths attributed to pneumonia and influenza (P&I) was at the epidemic threshold.
- Influenza-associated Pediatric Deaths: Six influenza-associated pediatric deaths were reported, including one influenza-associated pediatric death that occurred during the 2013-2014 season.
- Influenza-associated Hospitalizations: A cumulative rate for the season of 53.5 laboratory-confirmed influenza-associated hospitalizations per 100,000 population was reported.
- Outpatient Illness Surveillance: The proportion of outpatient visits for influenza-like illness (ILI) was 2.5%, above the national baseline of 2.0%. Seven regions reported ILI at or above region-specific baseline levels. Puerto Rico and six states experienced high ILI activity; four states experienced moderate ILI activity; 10 states experienced low ILI activity; New York City and 30 states experienced minimal ILI activity; and the District of Columbia had insufficient data.
- Geographic Spread of Influenza: The geographic spread of influenza in Guam and 12 states was reported as widespread; Puerto Rico, the U.S. Virgin Islands, and 30 states reported regional activity; the District of Columbia and six states reported local activity; and two states reported sporadic activity.
